Stream Charts: setup guide

Top 20 movies and TV shows on Netflix, Disney+, Prime Video, Stan and Binge, with cover art, summaries and trailers. Hosted on GitHub Pages with Microsoft sign-in, same pattern as the Action Tracker. Files: **index.html**, **icon-180.png** and **bg.jpg** (the faint background picture).

Final address: https://mkirsten583.github.io/stream-charts/

1. GitHub: create the site

1. On github.com signed in as mkirsten583, choose **New repository**. Name it **stream-charts**, set it to **Public**, and create it.
2. Click **uploading an existing file**, drag in **index.html**, **icon-180.png** and **bg.jpg**, then **Commit changes**.
3. Open **Settings, then Pages**. Under Source choose **Deploy from a branch**, branch **main**, folder **/ (root)**, and Save. The site is live in about a minute.

2. Azure: app registration (already done)

1. Your Stream Charts app registration is in place and its Application (client) ID is already built into **index.html**, so there is nothing to paste.
2. In the Azure portal open the registration, then **Authentication**. The platform must be **Single-page application (SPA)** with the redirect URI **https://mkirsten583.github.io/stream-charts/** (keep the trailing slash).
3. Under **API permissions** check that Microsoft Graph has **User.Read** and **Files.ReadWrite** (Delegated). No admin consent is needed for a personal account.

3. TMDB: free key for cover art

1. Create a free account at themoviedb.org and verify your email.
2. Open your profile, **Settings, API**, and request a key. Choose **Developer** and personal use, and fill in the short form (a simple description is fine).
3. Copy the **API Key** (32 characters). You will paste it into the tool in the next step.

4. First use (PC and iPhone)

1. Open the site, tap **Settings**, paste the TMDB key under **Cover art** and tap **Save key**. Posters, summaries and real trailer links load in a few seconds.
2. Tap the pill at the top right (**Not signed in**) and sign in with Microsoft. Your settings and cached art are saved to OneDrive, so every device picks them up.
3. On iPhone, sign in first and the key arrives from OneDrive, so you do not need to paste it again. In Safari tap **Share, Add to Home Screen**.

How it works

- **All services** is the first tab and the default view. It shows one top 10 for movies and one for TV across every service you have switched on. In Viewing chart mode each title earns 10 points for #1 on a service, 9 for #2 and so on, added up across services. In Popular now mode it ranks by TMDB popularity.
- **Viewing chart** is a snapshot of FlixPatrol's Australian daily top 10 for each service (Netflix 14 Oct, others 15 Oct 2026). Ask Claude to refresh it. Binge only publishes one combined top 10.

- **Popular now** pulls TMDB's live popularity ranking for titles streaming on each service in Australia. It refreshes itself each time you open it, but it is a popularity list, not a viewing chart.
- **Settings** holds the Services tick-boxes, **Add a streaming service** (needs the TMDB key; added services show TMDB's popular titles for that service), the TMDB key and OneDrive sign-in.
- **Background:** bg.jpg is shown very faintly behind the page. Replace the file with another picture of the same name to change it, and adjust the opacity values on **body::before** in index.html to make it stronger or fainter.
- Covers are matched to TMDB by title. Generic names such as "Tomb Raider" or "Below" can occasionally match the wrong release.
- The data file is **stream-data.json** in **C:\Users\Marc.Kirsten\OneDrive\marc.kirsten\Browser Tools\StreamCharts** (the folder is created on first sign-in if it is missing). It holds your settings, TMDB key and cached art, so do not share it.
- Any updated index.html from Claude already contains your client ID, so you can upload it straight over the old one.

This product uses the TMDB API but is not endorsed or certified by TMDB.
